

"I tinkered with the Leap Motion controller."

-Jamie Emerson

The Leap Motion controller reminded me of Iron Man, piquing my interest in physical computing. I wanted to explore connecting to digital environments beyond the use of a mouse and keyboard.

The tutorial I followed went through the basics of connecting to the controller and displaying the number of hands and fingers the controller was sensing. It ended with teaching you how to draw your palm and fingertips on screen as well as deciphering gestures. Ultimately I combined the counting example with another example that used your hand's X and Y position to dictate the hue and saturation of the background, into one.
